carburizing treatment picture

"The function of carburizing treatment is to improve the wear resistance of the surface layer (m with high carbon content) and maintain the high impact resistance of the heart, i.e. strength and

toughness. Surface carburizing is generally used for the treatment of low carbon steel. After treatment, the surface hardness of the parts is high and the wear resistance is good.

Q: Why choose us?

A1: We have 14 years experience for titanium products making.

A2: sample order is acceptable.

A3: lower price, good quality and short delivery time.
