The application of different grade titanium flange:

Titanium alloy has the characteristics of light weight, high strength and good corrosion resistance, so **titanium alloy flange** is often used in oil drilling, marine engineering, machinery and equipment manufacturing industry in the key pressure

parts of the connection.

Due to the excellent corrosion resistance of titanium material, the **pure titanium flange is much used for connecting the tube ends of the petrochemical project.** It is also useful in equipment exit and entrance to connect the two devices.
